

STA 5635 HW 6

Palmer Swanson

February 14, 2026

Problem 1

- (1a) Two random forest classifiers. One with 22 features, the other with 500. Table in figure 1

Model	Train Misclass. Error	Test Misclass. Error
Random Forest, 22 Features	0.000000	0.303333
Random Forest, 500 Features	0.000000	0.146667

Table 1: Train and Test Misclassification Errors, part a

- (1b) Compute feature importances using mean decrease in impurity and the permutation feature importances.

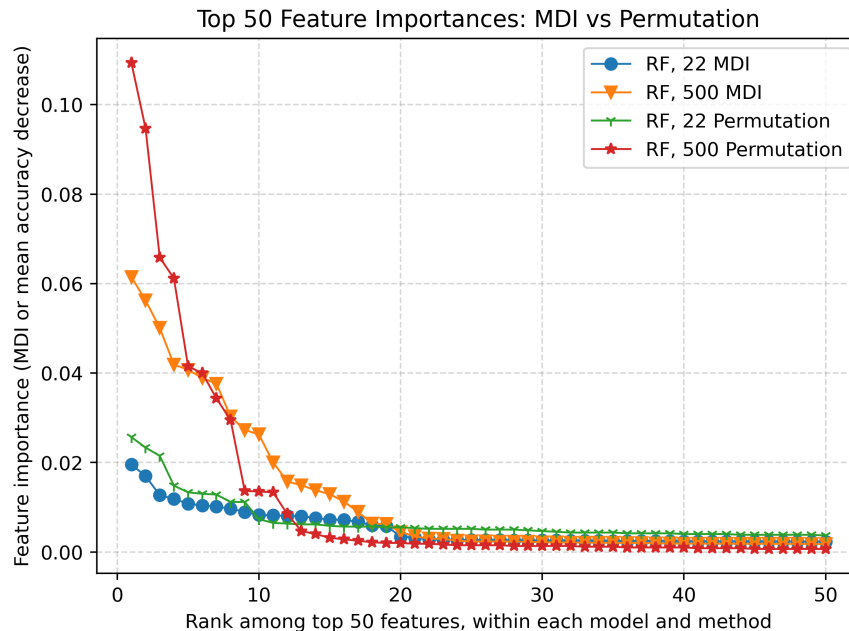

Figure 1: Feature Importances for the two RF, computed via MDI and via Permutations

- (1c)
