

Problem 1

- Null model:

$$L(w) = \sum_{j=1}^n y_j(w_0 + \sum_{i=1}^p w_i x_{ji}) - \ln(1 + \exp(w_0 + \sum_{i=1}^p w_i x_{ji}))$$

According to the notes, we basically do an Odds ratio decision rule:

Problem 2

- asdf
- aghjk
